

Thyroid System Support

Thyroid Support is designed for use in the patient with thyroid disease. It can be used alone or in combination with other accepted methods of therapy. The need for combination therapy is dictated by the level of glandular pathology. Thyroid support in this product is provided directly and indirectly through its whole food complexes, tissue extracts and concentrates, and botanical ingredients. Indirect support is based on established patterns of endocrine and metabolic interactions. The diseased thyroid gland is a challenging gland to manage. It is common in the dog to have autoantibodies against the thyroid. These destructive interactions require a long period of time before the effects are seen clinically as hypothyroidism.

Canine Thyroid Support is very effective and safe to administer to cats.

Suggested uses:

- General thyroid support
- Adrenal dysfunction
- Hypothyroidism
- Skin/coat disorders, conditions, issues
- Hyperthyroidism

Brochure Text

Canine Thyroid Support is designed for the patient with thyroid disease. As part of the endocrine system, the thyroid gland plays a major role in many different interactions between glands and organs in the body. Canine Thyroid Support provides critical trace nutrient support for the thyroid gland, the adrenal glands and the liver. The goal of this tissue support product is to facilitate better thyroid function by supporting the thyroid gland and other important tissues that interact with the thyroid gland.

Your veterinarian may recommend Canine Thyroid Support for general thyroid health or when testing parameters indicate the need for thyroid support. This product neither stimulates nor suppresses thyroid function. It provides functional whole foods for supporting the thyroid gland. Your pet can benefit from Canine Thyroid Support used on its own or in conjunction with thyroid medicine.

As always, your veterinarian and Standard Process have your pet's well-being in mind. You can rest assured that the addition of nutritional support is part of a well-rounded healthcare plan for your pet.
